PIPEMARK RANGE OF TAPE

ALL plastics (the majority of materials), ink and adhesives will degrade over time – they all have a level of UV resistance – so the question is how much / how long they will last.

It's an impossible question to answer as it is dependent on the level of UV exposure, climate, and localised environmental conditions. As such we do not offer any guarantees or warranties, as each installation will differ.

The product was initially lab tested for accelerated UV resistance and has since been proven in the marketplace over several years as you are aware.

The inks are the most UV stable flexo inks we are aware of in today's market, and we are not aware of any other ID tapes that outperforms Pipemark range.

We have been supplying this product to the market for 10 years now without any reported issues.

Albion Systems Limited.
